DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 6 and 7, filed on June 9, 2008, with respect to claims 1-8 have been fully considered and are persuasive. The 35 U.S.C § 103(a) rejection(s) of claims 1-8 have been withdrawn.

Allowable Subject Matter

2. Claims 1-8 are allowed.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance.

The prior art of record, taken alone or in combination, does not teaches the construction of a fixed angle wing lift-type horizontal shaft wind power generating device with a start assist function as described on and including all the disclosed limitations of independent claim 1, comprising:

a start assistance unit for switching the generator to a motor and performing a start assisting rotation which rotates the rotation shaft in the forward direction;

a generation restoring unit for restoring the motor to the generator when the start assisting rotation by the start assisting unit is suspended; and

a control unit for repeatedly changing operations of the start assistance unit and the generation restoring unit, the rotation rate of the rotation wing being swiftly increased above a predetermined value;

wherein a regular rotation can be started by the inertia of the start assisting rotation even at the time of winds too weak to rotate an ordinary fixed angle wing lift type horizontal shaft wind power generator alone.

The prior art of record, taken alone or in combination, does not teaches the design of a method for operating a fixed angle wing lift-type horizontal shaft wind powered generating device as described on and including all the disclosed limitations of independent claim 8, comprising the steps of:

operating a start assisting function when the wind velocity measuring unit detects a wind velocity lower than a predetermined velocity;

continuing operation of the start assisting function only during a time counting period of the first time counting unit;

suspending the operation of the start assisting function during a time counting period of the second time counting unit and switching the motor to the generator by the switch unit; and

repeatedly changing operations of the start assistance process and the generation restoring process, the rotation rate of the rotation wing being swiftly increased above a predetermined value;

wherein a regular rotation can be started by the inertia of the start assisting rotation even at the time of winds too weak to rotate an ordinary fixed angle wing lift type horizontal shaft wind power generator alone.

Dependent claims 2-7 are considered allowable by their respective dependence on allowed independent claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
